

CHATTING ABOUT HEALTH

FEBRUARY IS AMERICAN HEART MONTH

Heart disease is the leading cause of death in the US

Heart disease refers to several types of heart conditions.

You can reduce your risk of heart disease through lifestyle changes.

The most common type of heart disease in the United States is coronary artery disease (CAD).

- CAD affects the blood flow to the heart.
- Decreased blood flow can cause a heart attack.

A healthy lifestyle, can help keep your blood pressure, cholesterol, and blood sugar levels normal and lower your risk for heart disease and heart attack.

- Healthy Diet
 - Eat healthy foods including fresh fruits and vegetables
 - Eat fewer processed foods
 - Limit sodium and sugar intake

Risk factors for heart disease include

- high blood pressure
- high cholesterol
- smoking
- diabetes
- obesity
- physical inactivity
- having a diet high in saturated fats, trans fats and cholesterol
- excessive alcohol use

- Maintain a healthy weight
- Get regular physical activity
- Don't smoke
- Manage medical conditions like high blood pressure, high cholesterol and diabetes
